Women suffer disproportionate rates of chronic disease and disability from some conditions, and often have high out-of-pocket health care costs. The passage of the Patient Protection and Affordable Care Act of 2010 (ACA) provides the United States with an opportunity to reduce existing health disparities by providing an unprecedented level of population health care coverage. The expansion of coverage to millions of uninsured Americans and the new standards for coverage of preventive services that are included in the ACA can potentially improve the health and well-being of individuals across the United States. Women in particular stand to benefit from these additional preventive health services. Clinical Preventive Services for Women reviews the preventive services that are important to women’s health and well-being. It recommends that eight preventive health services for women be added to the services that health plans will cover at no cost. The recommendations are based on a review of existing guidelines and an assessment of the evidence on the effectiveness of different preventive services. The services include improved screening for cervical cancer, sexually transmitted infections, and gestational diabetes; a fuller range of contraceptive education, counseling, methods, and services; services for pregnant women; at least one well-woman preventive care visit annually; and screening and counseling for interpersonal and domestic violence, among others. Clinical Preventive Services for Women identifies critical gaps in preventive services for women as well as measures that will further ensure optimal health and well-being. It can serve as a comprehensive guide for federal government agencies, including the Department of Health and Human Services and the Center for Disease Control and Prevention; state and local government agencies; policy makers; health care professionals; caregivers, and researchers.

An inspiring collection of stories written by two successful leaders that highlights the unique role micro communities play in helping individuals achieve their goals and overcome obstacles--physical or otherwise--even in the face of great adversity.

Comprised of the accounts of twelve heterosexual couples in which the man is on the Autism Spectrum, this book invites both partners to discuss their own perspectives of different key issues, including anxiety, empathy, employment and socialising. Autism expert Tony Atwood contributes a commentary and a question and answer section for each of the twelve accounts. The first book of its kind to provide perspectives from both sides of a relationship on a variety of different topics, Neurodiverse Relationships is the perfect companion for couples in neurodiverse relationships who are trying to understand one another better.

This guide helps people with Medicare understand Medigap (also called Medicare Supplement Insurance) policies. A Medigap policy is a type of private insurance that helps you pay for some of the costs that Original Medicare doesn’t cover.

Drug overdose, driven largely by overdose related to the use of opioids, is now the leading cause of unintentional injury death in the United States. The ongoing opioid crisis lies at the intersection of two public health challenges: reducing the burden of suffering from pain and containing the rising toll of the harms that can arise from the use of opioid medications. Chronic pain and opioid use disorder both represent complex human conditions affecting millions of Americans and causing untold disability and loss of function. In the context of the growing opioid problem, the U.S. Food and Drug Administration (FDA) launched an Opioids Action Plan in early 2016. As part of this plan, the FDA asked the National Academies of Sciences, Engineering, and Medicine to convene a committee to update the state of the science on pain research, care, and education and to identify actions the FDA and others can take to respond to the opioid epidemic, with a particular focus on informing FDA’s development of a formal method for incorporating individual and societal considerations into its risk-benefit framework for opioid approval and monitoring.

Opioid use and infectious diseases are intertwined epidemics. Despite the fact that the United States is more than two decades into the opioid crisis - the cause of tens of thousands of deaths every year on its own - the health system has not sufficiently addressed the morbidity and mortality of drug use coupled with infectious diseases. This is at least in part due to traditional models of substance use disorder care wherein substance use disorder treatment is delivered independently of other medical care, thereby inhibiting the delivery of comprehensive care. As a result, the United States is experiencing a drastic increase in infectious diseases that spread with drug use. Opportunities to Improve Opioid Use Disorder and Infectious Disease Services examines current efforts to integrate care and describes barriers, such as inadequate workforce and training; lack of data integration and sharing; and stigma among people who use drugs and have also been diagnosed with an infectious disease. The conclusions and recommendations of this report will help to promote patient-centered, integrated programs to address this dual epidemic.

Mid-2016 DOL regulations make millions more white-collar employees eligible for overtime pay, by greatly increasing the salary threshold for the white-collar exemption. Updates on the PATH Act (Protecting Americans From Tax Hikes; Pub. L. No. 114-113. The DOL published the "fiduciary rule" in final form in April 2016, with full compliance scheduled for January 1, 2018. The rule makes it clear that brokers who are paid to offer guidance on retirement accounts and Individual Retirement Arrangements (IRAs) are fiduciaries. In early 2016, the Equal Employment Opportunity Commission (EEOC) announced it would allow charging parties to request copies of the employer's position statement in response to the charge. The Supreme Court ruled that, in constructive discharge timing requirements run from the date the employee gives notice of his or her resignation--not the effective date of the resignation. Certiorari was granted to determine if the Federal Arbitration Act (FAA) preempts consideration of severing provisions for unconscionability. The Patient Protection and Affordable Care Act (ACA) was designed to increase health insurance quality and affordability, lower the uninsured rate by expanding insurance coverage, and reduce the costs of healthcare overall. Along with sweeping change came sweeping criticisms and issues. This book explores the pros and cons of the Affordable Care Act, and explains who benefits from the ACA. Readers will learn how the economy is affected by the ACA, and the impact of the ACA rollout.

The Future of Nursing explores how nurses’ roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America’s increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor’s degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles -- including limits on nurses’ scope of practice -- should be removed so that the health system can reap the full benefit of nurses’ training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.
