Introduction to Sociology 2e adheres to the scope and sequence of a typical, one-semester introductory sociology course. It offers comprehensive coverage of core concepts, foundational scholars, and emerging theories, which are supported by a wealth of engaging learning materials. The textbook presents detailed section reviews with rich questions, discussions that help students apply their knowledge, and features that draw learners into the discipline in meaningful ways. The second edition retains the book's conceptual organization, aligning to most courses, and has been significantly updated to reflect the latest research and provide examples most relevant to today's students. In order to help instructors transition to the revised version, the 2e changes are described within the preface. The images in this textbook are grayscale. Authors include: Heather Griffiths, Nathan Keirns, Eric Strayer, Susan Cody-Rydzewski, Gail Scaramuzzo, Tommy Sadler, Sally Vyain, Jeff Bry, Faye Jones

growing awareness of the complex networks that pervade modern society. We see them in the rapid growth of the Internet, the ease of global communication, the swift spread of news and information, and in the way epidemics and financial crises develop with startling speed and intensity. This introductory book on the new science of networks takes an interdisciplinary approach, using economics, sociology, computing, information science and applied mathematics to address fundamental questions about the links that connect us, and the ways that our decisions can have consequences for others.

When Lenin asked, "Who will beat whom?" (Kto kogo?), he had no plan to wage revolutionary class war in culture. Many young Communists thought differently, however. Seeking in the name of the proletariat to wrest "cultural hegemony" from the intelligentsia, they turned culture into a battlefield in the 1920s. But was this, as Communist militants thought, a genuine class struggle between "proletarian" Communists and the "bourgeois" intelligentsia? Or was it, as the intelligentsia believed, an onslaught by the ruling Communist Party on the eternal principles of cultural autonomy and intellectual freedom? In this volume, one of the foremost historians of the Soviet Union chronicles the fierce battle on "the cultural front" from the October Revolution through the Stalinist 1930s. Sheila Fitzpatrick

brings together ten of her essays—two previously unpublished and all revised for inclusion here—which illuminate key arenas of the prolonged struggle over cultural values and institutional control. Individual essays deal with such major issues as the Cultural Revolution, the formation of the new Stalinist elite, and socialist realism, as well as recounting colorful episodes including the uproar over Shostakovich's opera *Lady Macbeth of the Mtsensk District*, arguments over sexual mores, and the new consumerism of the 1930s. Closely examining the cultural elites and orthodoxies that developed under Stalin, Fitzpatrick offers a provocative reinterpretation of the struggle's final outcome in which the intelligentsia, despite its loss of autonomy and the debasement of its culture, emerged as a partial victor. The Cultural Front is essential reading for anyone interested in the formative history of the Soviet Union and the dynamic relationship between culture and politics.

The outcome is a balanced approach to the theory and application of business concepts, with attention to the knowledge and skills necessary for student success in this course and beyond.

"This report presents an evaluation of the current methods used to generate air emissions information from all freight transportation activities and discusses their suitability for purposes such as health and climate risk assessments, prioritization of emission reduction activities (e.g., through State Implementation Plans), and public education. The report is especially valuable for (1) its identification of the state of the practice, gaps, and strengths and limitations of current emissions data estimates and methods and (2) its conceptual model that offers a comprehensive representation of freight activity by all transportation modes and relationships between modes. This report will better inform the near-term needs of public and private stakeholders regarding the quality of emissions data and guide future research that links freight activities with air emissions."--pub. desc.
