Early user interface (UI) practitioners were trained in cognitive psychology, from which UI design rules were based. But as the field evolves, designers enter the field from many disciplines. Practitioners today have enough experience in UI design that they have been exposed to design rules, but it is essential that they understand the psychology behind the rules in order to effectively apply them. In Designing with the Mind in Mind, Jeff Johnson, author of the best selling GUI Bloopers, provides designers with just enough background in perceptual and cognitive psychology that UI design guidelines make intuitive sense rather than being just a list of rules to follow. The first practical, all-in-one source for practitioners on user interface design rules and why, when and how to apply them Provides just enough background into the reasoning behind interface design rules that practitioners can make informed decisions in every project Gives practitioners the insight they need to make educated design decisions when confronted with tradeoffs, including competing design rules, time constraints, or limited resources

During the post-war era, the emerging consumer economy radically changed both the discourse and practice of architecture. It was a time where architecture became a mainstream commodity whose products sold through mass media; a time in which Thomas Gordon Cullen came to be one of Britain 's best-known twentieth-century architectural draftsmen. Despite Cullen 's wide acclaim, there has been little research into his life and work; particularly his printed images and his methods of operation. This book examines Cullen 's drawings and book design and also looks into his process of image making to help explain his considerable popularity and influence which continues to this day. It presents the lessons Cullen had to offer in today 's design culture and practice and looks into the post-war consumerist design strategies that are still used today.
