The Mechanism of Mind presents Edward de Bono’s original theories on how the brain functions, processes information and organises it. It explains why the brain, the `mechanism`, can only work in certain ways and introduces the four basic types of thinking that have gone on to inform his life’s work, namely `natural thinking`, `logical thinking`, ` mathematical thinking` and ...

The Mechanism of Mind: Understand how your mind works to ...
In this book, Edward De Bono proposes a new religion. Whereas some religions may control the self through guilt and the promise of an after life, or self abdication, Edward puts respect for one's self and others at the heart of his 'brand'. The key measure of a happiness, he suggests, is the cope/demand ratio of different aspects of life.

Edward De Bono Books – Goodreads
Lateral Thinking is Edward de Bono’s original portrayal of what lateral thinking is, how it works and how to use it to develop your own potential for thinking and problem solving. First published in 1967 as The Use of Lateral Thinking , this classic international bestseller remains as relevant to learning, problem solving and creative thinking today as when it was first published.

Edward De Bono – amazon.com
First published in 1985, Edward de Bono's Six Thinking Hats is a management book whose suggestions are as relevant for successful thinking and decision-making today as they were when the book was first published. De Bono describes a structured method that provides a way to be more impartial as we evaluate ideas, whether doing so as an individual or as a team.

Meetings are a crucial part of all our lives, but too often they go nowhere and waste valuable time. In Six Thinking Hats, Edward de Bono shows how meetings can be transformed to produce quick, decisive results every time. The Six Hats method is a devastatingly simple technique based on the brain’s different modes of thinking. The intelligence, experience and information of everyone is harnessed to reach the right conclusions quickly. These principles fundamentally change the way you work and interact. They have been adopted by businesses and governments around the world to end conflict and confusion in favour of harmony and productivity.

THE classic work about improving creativity from world-renowned writer and philosopher Edward de Bono In schools we are taught to meet problems head-on: what Edward de Bono calls 'vertical thinking'. This works well in simple situations - but we are at a loss when this approach fails. What then? Lateral thinking is all about freeing up your imagination. Through a series of special techniques, in groups or working alone, Edward de Bono shows how to stimulate the mind in new and exciting ways. Soon you will be looking at problems from a variety of angles and offering up solutions that are as ingenious as they are effective. You will become much more productive and a formidable thinker in your own right. 'If more bankers and traders had read Lateral Thinking and applied the ideas of Edward de Bono to their own narrow definitions of risk, reward and human expectations, I suspect we would be in much better shape than we are' - Sir Richard Branson

Attention is a key part of thinking clearly and productively, and yet we pay very little attention to attention itself. If you see someone lying injured in the middle of the road, for example, your attention would go to that person but, if a bright pink dog wandered past at the same time, your attention would automatically stray to the dog. That is precisely the weakness of attention - it is pulled to the unusual. How much attention do we pay to the usual? So, what can we do about it? Instead of waiting for attention to be pulled towards something unusual, we can set out frameworks for 'directing' our attention in a conscious manner. Just as we can decide to look north, west or even south-east, so we can set up a framework for directing our attention, and that's where Edward de Bono's 'six frames' come in. Each frame is a direction or method in/with which to look, based on a different shape - triangle, circle, heart, square, diamond, slab. Today we are literally surrounded by information and it has never been so easy to obtain. Yet, information itself is not enough; it's how we look at it that really counts. Using the 'six frames' technique is the key to extracting real value from the masses of facts and figures out there and, like all de Bono's techniques, it is simple, effective and will utterly change the way you interpret information.

First published in 1977, in this extraordinarily prescient book Edward de Bono sets out his method for achieving the ultimate 21st century goal: work-life balance. Defined in terms of life-space and self-space, de Bono invites the reader to look at their life and measure the gap between these spaces – the smaller the gap, the greater our chances at happiness; but if the life-space is vastly bigger than the self-space, our coping ability is compromised and anxiety is likely. For anyone concerned with happiness and life-fulfilment this book is essential reading, and is perhaps more resonant with readers now than ever before.

Western thinking is failing because it was not designed to deal with change In this provocative masterpiece of creative thinking, Edward de Bono argues for a game-changing new way to think. For thousands of years we have followed the thinking system designed by the Greek philosophers Socrates, Plato and Aristotle, based on analysis and argument. But if we are to flourish in today's rapidly changing world we need to free our minds of these 'boxes' and embrace a more flexible and nimble model. Parallel Thinking is an invaluable insight into the word of creativity; de Bono unveils unique methods of brainstorming and explains preconceived ideas of what creativity involves and is. This book is not about philosophy; it is about the practical (and parallel) thinking required to get things done in an ever-changing world.

The first practical explanation of how creativity works, this results-oriented bestseller trains listeners to move beyond a "vertical" mode of thought to tap the potential of lateral thinking.

Our happiness and success depend on clear thinking. But too many of us are compromised by confusion, trying to do too much at once, and not knowing what to do next. In Teach Yourself to Think, Edward de Bono shows that good thinking depends on a simple five-stage process that anyone can learn. It will enable you to assess your goals, sort available information, identify the available choices, make a decision and, finally, turn thought into action. This book offers brilliant advice for anyone who needs to be able to respond to and deal with a vast range of situations at work and in life quickly, efficiently and intelligently.

Is thinking a matter of intelligence or a skill that can be taught deliberately? Can thinking be taught directly as a curriculum subject in schools?

In Practical Thinking de Bono’s theme is everyday thinking, how the mind actually works – not how philosophers think it should. Based on the results of his famous Black Cylinder Experiment (a critical thinking task that asks participants why they think a black cylinder falls over), de Bono explores the four practical ways of being right. From there he picks out and names the five levels of understanding – and the five major mistakes in thinking. From memes and Instagram to twitter and bestselling books like Mistakes I Made At Work, mistakes – and what we can learn from them – are a hot topic. With Edward you'll learn exactly why we all make them.
