How should we understand the many reports that poverty is the mother of innovation in India? What has the role of austerity been in the development of India's knowledge economy? In this critical study of Indian innovation, or 'Indovation', Thomas Birtchnell explores how the complex mobilities of 'globals' with stakes in India have transformed discourses and imaginaries about innovation in the region. He adopts a critical eye to the notion of Indovation by focusing on the various circuits of globals where India's knowledge economy is concentrated: expertise, entrepreneurship and community. Birtchnell traces the various discourses and counter-discourses around an Indian way of working and illustrates how differences in the international dimensions of austerity allow India's knowledge economy to prosper.

How should we understand the many reports that poverty is the mother of innovation in India? What has the role of austerity been in the development of India's knowledge economy? In this critical study of Indian innovation, or 'Indovation', Thomas Birtchnell explores how the complex mobilities of 'globals' with stakes in India have transformed discourses and imaginaries about innovation in the region. He adopts a critical eye to the notion of Indovation by focusing on the various circuits of globals where India's knowledge economy is concentrated: expertise, entrepreneurship and community. Birtchnell traces the various discourses and counter-discourses around an Indian way of working and illustrates how differences in the international dimensions of austerity allow India's knowledge economy to prosper.

Birtchnell and Hoyle explore how printers, designs, materials and infrastructures all need to be 'just right' in order for meaningful social change to happen with appropriate scale. The 3D4D Challenge suggests 3D printing could reach scale in the Global South, even perhaps having the same impact as the mobile phone or microfinance in development.

A vivid look at how India has developed the idea of entrepreneurial citizens as leaders mobilizing society and how people try to live that promise Can entrepreneurs develop a nation, serve the poor, and pursue creative freedom, all while generating economic value? In Chasing Innovation, Lilly Irani shows the contradictions that arise as designers, engineers, and businesspeople frame development and governance as opportunities to innovate. Irani documents the rise of "entrepreneurial citizenship" in India over the past seventy years,

Acces PDF Indovation Innovation And A Global Knowledge Economy In India Critical Studies Of The Asia Pacific

demonstrating how a global ethos of development through design has come to shape state policy, economic investment, and the middle class in one of the world's fastest-growing nations. Drawing on her own professional experience as a Silicon Valley designer and nearly a decade of fieldwork following a Delhi design studio, Irani vividly chronicles the practices and mindsets that hold up professional design as the answer to the challenges of a country of more than one billion people, most of whom are poor. While discussions of entrepreneurial citizenship promise that Indian children can grow up to lead a nation aspiring to uplift the poor, in reality, social, economic, and political structures constrain whose enterprise, which hopes, and which needs can be seen as worthy of investment. In the process, Irani warns, powerful investors, philanthropies, and companies exploit citizens' social relations, empathy, and political hope in the quest to generate economic value. Irani argues that the move to recast social change as innovation, with innovators as heroes, frames others—craftspeople, workers, and activists—as of lower value, or even dangers to entrepreneurial forms of development. With meticulous historical context and compelling stories, *Chasing Innovation* lays bare how long-standing power hierarchies such as class, caste, language, and colonialism continue to shape opportunity in a world where good ideas supposedly rule all.

What does innovation mean to and in India? What are the predominant areas of innovation for India, and under what situations do they succeed or fail? This book addresses these all-important questions arising within diverse Indian contexts: informal economy, low-cost settings, large business groups, entertainment and copyright-based industries, an evolving pharma sector, a poorly organized and appallingly underfunded public health system, social enterprises for the urban poor, and innovations for the millions. It explores the issues that promote and those that hinder the country's rise as an innovation leader. The book's balanced perspective on India's promises and failings makes it a valuable addition for those who believe that India's future banks heavily on its ability to leapfrog using innovation, as well as those sceptical of the Indian state's belief in the potential of private enterprise and innovation. It also provides critical insights on innovation in general, the most important of which being the highly context-specific, context-driven character of the innovation project.

A major contribution toward the ongoing debates on the nature and history of Hinduism in India. Is Hinduism coherent, or should it be viewed as a conglomeration of many distinctive traditions? What were (or are) its most important and central teachings? When did the idea of "Hinduism" first arise and what have been the consequences? What were the effects of British rule on the religion and what are the effects of continuing modernization? This book responds to all such debates surrounding Hinduism in the colonial and contemporary periods. It emphasizes on Hinduism as it arose and developed in the subcontinent itself—an approach which facilitates greater attention to detail and an understanding of the specific context in which new movements and changes have taken place.

The new "mobilities turn" has become a powerful perspective in social theory. John Urry's oeuvre has been very influential in the emergence of this new field and has had lasting impacts on many scholars. This collection presents originally commissioned essays from leading scholars in the field who reflect on how Urry's writing influenced the course of their research and theorizing. This volume gathers contributions in relation to John Urry's path-breaking work. The new "mobilities turn" made a strong imprint in European social theory and is beginning to make an impact in the Americas and Asia as well. It challenges mainstream theoretical and empirical approaches that were grounded in a sedentary and bounded view of states. It propels innovative thinking about social and media ecologies, complex systems and social change. It bridges many disciplines and methodologies, leading to new approaches to existing

Acces PDF Indovation Innovation And A Global Knowledge Economy In India Critical Studies Of The Asia Pacific

problems while also resonating with questions about both history and the future. Mobilities research marks the rise of academic and intellectual cooperation and collaboration "beyond societies", as nations around the world face the ecological limits of contemporary mobility and energy systems. The contributors represent several national contexts, including England, Germany, Denmark, Finland, Taiwan, Brazil, Canada, Australia and the USA. This book collects personal essays and gives insight into a vivid network of scientists who have connections of various degrees to the late John Urry as an academic figure, an author and a person.

This book showcases cutting-edge research papers from the 6th International Conference on Research into Design (ICoRD 2017) "the largest in India in this area" written by eminent researchers from across the world on design process, technologies, methods and tools, and their impact on innovation, for supporting design for communities. While design traditionally focused on the development of products for the individual, the emerging consensus on working towards a more sustainable world demands greater attention to designing for and with communities, so as to promote their sustenance and harmony - within each community and across communities. The special features of the book are the insights into the product and system innovation process, and the host of methods and tools from all major areas of design research for the enhancement of the innovation process. The main benefit of the book for researchers in various areas of design and innovation are access to the latest quality research in this area, with the largest collection of research from India. For practitioners and educators, it is exposure to an empirically validated suite of theories, models, methods and tools that can be taught and practiced for design-led innovation. The contents of this volume will be of use to researchers and professionals working in the areas on industrial design, manufacturing, consumer goods, and industrial management.

Why do citizens of states with strict surveillance care so little about their digital privacy? Why do Brazilians eschew geo-tagging on social media? What drives young Indians to friend "foreign" strangers on Facebook and give "missed calls" to people? Payal Arora answers these questions and many more about the internet's next billion users.

Small in number but great in influence, mobile elites have shaped the contours of global capitalism. Today these elites continue to flourish globally but in a changing landscape. The current economic crisis—and rising concerns about the moral legitimacy of extreme wealth—coincides with stern warnings over the risks posed by climate change and the unsustainable use of resources. Often an out-of-bounds topic in critical social science, elites are thought of as too inaccessible a group to interview and too variable a minority to measure. This groundbreaking collection sets out to challenge this perception. Through the careful examination of the movements of the one per cent through the everyday spaces of the ninety-nine per cent, *Elite Mobilities* investigates the shared zones elites inhabit alongside the commons: the executive lounge in the airport, the penthouse in the hotel, or the gated community next to the slum. Bringing together the pioneer scholars in critical sociology today, this collection explores how social scientists can research, map, and "track" the flows and residues of objects, wealth and power surrounding the hypermobile. *Elite Mobilities* sets a new benchmark in social science efforts to research the powerful and the privileged. It will appeal to students and scholars interested in mobilities, transport, tourism, social stratification, class, inequality, consumption, and global environmental change.
