This book is organized around eight research methods to help users plan and conduct their first educational research projects. By proceeding through chapter contents and completing the in-text exercises, readers will simultaneously prepare a research plan and learn how to obtain and analyze data, address research questions and hypotheses, and prepare a report of their projects. In keeping with the main purpose of helping users clearly understand and apply research concepts, many pedagogical features have been included in the book. Additionally, each chapter contains one or more special sections titled "Applying Technology."

This rigorous volume focuses on the underlying perspectives justifying the major approaches currently being used in educational research.Introductory chapters lay the foundation for exploring varying research perspectives. Nine specific perspectives on research/post positivism, pragmatism, constructivism, ethics and deliberate democracy, criticism, interpretivism, race/ethnicity/gender, arts-based research, and post structuralism/are examined, through discussions written by senior scholars known for their expertise in the perspective. And, a (ligned tour) of criticism is given, in which these same scholars demonstrate the use of the (critical method) by critiquing six studies selected as exemplars of different research approaches.For education students who aspire to become researchers, and for those who simply need to read and understand research literature.

It weaves actual research "stories" into the presentation of research topics, and it emphasizes validity, authenticity, and practical significance as overarching research goals.
