How can Africa, the world's most lagging region, benefit from globalisation and achieve sustained economic growth? Africa needs greater investment by Multinational Enterprises (MNEs) to improve competitiveness and generate more growth through positive spill-over effects. Despite the fact that Africa's returns on investment averaged 29% since 1990, Africa has gained merely 1% of global Foreign Direct Investment (FDI) flows. The challenge for African countries is how to be a more desirable destination for FDI. The study integrates three currents of economic research, namely from the literature on (endogenous) economic growth, convergence and regional integration, the explanations for Africa's poor growth and the growing understanding of the role of MNEs in a global economy. The empirical side of the book is based on an econometric study of the determinants of FDI in Africa as well as a detailed firm-level survey conducted in 2000.

Listed in top 50 Management Books for 2006 in the Australian Financial Review BOSS magazine, January 2007, Volume 8. In *The Labour Market Ate My Babies* Barbara Pocock, acclaimed author of *The Work/Life Collision*, examines the impact of modern working life on our children. In this book, young Australians from all over the country, city and the bush, rich and poor, talk about the good and bad of parental work - the trade off between money and time, consumer riches versus time for each other. Pocock argues that the modern labour market is having a huge impact on today's youth and eating into our capacity to care. Children have become a 'market'. Caring for kids and selling to kids is big business, as stressed, time-poor parents struggle to care for their children and salve their guilt with presents and pocket money. How will this future generation of workers weigh up the labour market and organise their lives? *The Labour Market Ate My Babies* argues that a sustainable future requires new policy approaches to work that incorporate the perspectives of children. We should: ensure that parents get the time they need away from work when they need it help parents get a good fit between how they want to work, and how they have to provide quality, low cost, public childcare options stop advertising to kids in ways that stimulate an early work/spend cycle. It's good to get money coming in and probably it's good to work as hard as you can when you're younger so when you're older you can retire with some money. But there should probably be a limit to how much before your relationships with other people start to strain because you are never there (Adam, 16)

In the fast-paced world of international business, competitive intelligence is necessary for the daily survival of small firms and national economies alike. In *Competitive Intelligence and Senior Management*, veteran consultant Joseph H. A. M. Rodenberg argues that business leaders should devote more of their time and attention to seeking out and interpreting information about competitors. This instructive volume offers tools that will help senior managers to increase their firms' competitiveness, carry out successful mergers and acquisitions, and avoid surprise attacks from corporate raiders and private equity firms.

This report defines offshoring in detail, describes the wide-ranging effects that offshoring can have on employment both positively and negatively, and outlines the policy implications, suggesting ways to limit the downside of offshoring while building trust among stakeholders.

This is a book about how management and control decisions are made by persons who collaborate and possibly use the support of an information system. The decision is the result of human conscious activities aiming at choosing a course of action for attaining a certain objective (or a set of objectives). The act of collaboration implies that several entities who work together and share responsibilities to jointly plan, implement and evaluate a program of activities to achieve the common goals. The book is intended to present a balanced view of the domain to include both well-established concepts and a selection of new results in the domains of methods and key technologies. It is meant to answer several questions, such as: a) "How are evolving the business models towards the ever more collaborative schemes?"; b) "What is the role of the decision-maker in the new context?" c) "What are the basic attributes and trends in the domain of decision-supporting

information systems?"; d) "Which are the basic methods to aggregate the individual preferences?" e) "What is the impact of modern information and communication technologies on the design and usage of decision support systems for groups of people?".

Developing and implementing a systematic analytics strategy can result in a sustainable competitive advantage within the sport business industry.
