Updated throughout, this highly readable best-seller presents basic concepts and practical material in each of the areas fundamental to modern surveying (geomatics) practice. Its depth and breadth are ideal for self-study. KEY TOPICS: Includes new discussions on the impact of the new L2C and L5 signals in GPS and on the effects of solar activity in GNSS surveys. Other new topics include an additional method of computing slope intercepts; an introduction to mobile mapping systems; 90% revised problems; and new Video Solutions. MARKET: A useful reference for civil engineers

Covers all aspects of epilepsy, from basic mechanisms to diagnosis and management, as well as legal and social considerations.

This book focuses on the context dependency of cell signalling by showing how the endosomal system helps to structure and regulate signalling pathways. The location and concentration of signaling nodes regulate their activation cycles and engagement with distinct effector pathways. Whilst many cell signaling pathways are initiated from the cell surface, endocytosis provides an opportunity for modulating signaling networks ' output. In this book, first a series of reviews describe the endocytic and endosomal system and show how these subcellular platforms sort and regulate a wide range of signaling pathway components and phenotypic outputs. The book then reviews the latest scientific insights into how endocytic trafficking and subcellular location modulate a set of major pathways that are essential to normal cellular function and organisms ' development.

This publication is one of a series on archaeological field survey techniques published by Historic England. It covers the electronic total station theodolite (TST) and its use in landscape archaeology.

Farming practices underwent momentous transformations in the Mid Saxon period, between the 7th and 9th centuries AD. This study applies a standardised set of repeatable quantitative analyses to the charred remains of Anglo-Saxon crops and weeds, to shed light on crucial developments in crop husbandry between the 7th and 9th centuries.

The 2001 report completed a comprehensive review of the risks to offspring following parental exposure to radiation. The review included an evaluation of those diseases which have both hereditary and environmental components. The major finding is that the total hereditary risk to the first generation following radiation is less than one tenth of the risk of fatal carcinogenesis following irradiation. The Committee concluded that a sounder basis now exists for estimating the hereditary risks of radiation exposure. This is due to advances in molecular genetics, and in the evaluation of multifactorial diseases, such as coronary heart disease.
