provides several functions including support, protection, movement and making blood cells.

Antagonistic muscles work against each other in pairs.

The skeleton - Skeletal and muscular systems - KS3 Biology ...

Answer: • Agonist muscle action (also known as the prime mover) is when the muscle under tension is doing the work. • Antagonist muscle action is when a muscle relaxes to allow the agonist to work as movement occurs. In this way muscle work in pairs as one contracts and the opposing muscle relaxes. d) Fixator
