American air power is a dominant force in today's world. Its ascendancy, evolving in the half century since the end of World War II, became evident during the first Gulf War. Although a great deal has been written about military operations in Desert Shield and Desert Storm, this deeply researched volume by Dr. Diane Putney probes the little-known story of how the Gulf War air campaign plan came to fruition. Based on archival documentation and interviews with USAF planners, this work takes the reader into the planning cells where the difficult work of building an air campaign plan was

accomplished on an around-the-clock basis. The tension among air planners is palpable as Dr. Putney traces the incremental progress and friction along the way. The author places the complexities of the planning process within the context of coalition objectives. All the major players are here: President George H. W. Bush, General H. Norman Schwarzkopf, General Colin Powell, General Chuck Horner, and Secretary of Defense Richard Cheney. The air planning process generated much debate and friction, but resulted in great success - a 43-day conflict with minimum casualties. Dr. Putney's

Desert Storm provided a renewed interest in planning air campaigns. The Air Campaign Planning Tool (ACPT), a combined HQ USAFIXOOC and ARPA initiative, provides a modem computer based planning tool to the JFACC's war planning staff. ACSC research project 95-034 provided three enhancements to the development of the first operational version of ACPT. First, an air campaign Historical Reference Library (MRL) was created and included in the "real world" ACPT, to provide the air campaign planner with a on-line, easy to use reference of past air campaigns from the perspective of a 1990s airpower planner.

Secondly, an unclassified, ACPT Tutorial was created for simultaneous release with the next version of ACPT this summer. Finally, the level of ACSC student exposure to ACPT was increased by expanding ACPT use during the ACES DRAGON exercise to over 50 students, demonstrating ACPT to 50 ACSC faculty and many senior officers at both Air University's 1994 Air & Space Symposium and CADRE's 1995 JFACC Symposium. The HRL provides a synopsis, chronology, objectives, missions, tasks and lessons learned on eleven historical air campaigns. It covers a broad spectrum of air campaigns from major regional conflicts, like

Storm in 1991, the role of allied air power in the nation's second war against Iraq was not apparent to most observers, since the land offensive began concurrently with the air offensive and the overwhelming majority of the reporters who accompanied allied forces into combat were embedded with ground units. Even today, the air war history of Operation Iraqi Freedom remains largely unreported, despite the fact that American air assets, aided substantially by the air contributions of the United Kingdom and Australia, played a key role in enabling the prompt achievement of the coalition's

A study of the historic World War II naval battle, the first involving aircraft carriers and first in which neither warship was in sight of the other. the Solomon Islands, the Americans sent the carriers Lexington and Yorktown to counter the move, setting the stage for the Battle of the Coral Sea . . . In this book, historian Robert C. Stern analyzes the Battle of the Coral Sea, the first major fleet engagement where the warships were never in sight of each other. Unlike the Battle of Midway, the Battle of the Coral Sea has received remarkably little study. Stern covers not only the action of the ships and their air groups but also describes the impact of this pivotal engagement. His analysis looks at the short-term impact as well as the long-term
